---

### Training dates – Q4

---

### JobPack webinars

---

### New JobReport

---

### New BIM Module

---

We are exhibiting at CMTS 2009 for the third consecutive year, and we are using this forum to release our latest option for the JobPack Graphical Real Time Scheduler - Business Intelligence. With Business Intelligence customers can customise any of the screens to extract data from the database, manipulate the data and execute applications against the results. Business Intelligence is defined by user written "plug-ins" to automate repetitive tasks that are unique to a specific customer. Once deployed the plug-in is available to any user at any time.

Geoffrey Dawe, Sales Director for QIC, our partner in Canada, is excited about the opportunities JobPack has in the Canadian market with 3 new systems being installed this quarter. "CMTS is a good jumping off point to really grow our business here and expand, based upon our success". Geoff also adds that we are showcasing our latest JobReport feature. A 1-on-1 demo can be arranged to see the enhancements in this latest release. Call or email Geoff direct at 905-895-8767 sales@jobpack.com, visit [www.jobpack.com](http://www.jobpack.com) and click "contact us". Please make a point of looking Geoff up at the booth to see what's new and exiting inside of **JobPack for CMTS 2009**.

## JobPack Webinars

In order to make it easier for clients to get a “look-see” at JobPack we have set up a series of Webinars. Here, on an informal basis, interested clients can dial in to a complete overview of JobPack, have an opportunity to see the system in operation and, of course, ask questions and have any specific features demonstrated. We have emailed out invitations. To sign up for a Webinar you simply need to:

Go to [www.jobpack.com](http://www.jobpack.com), click on the

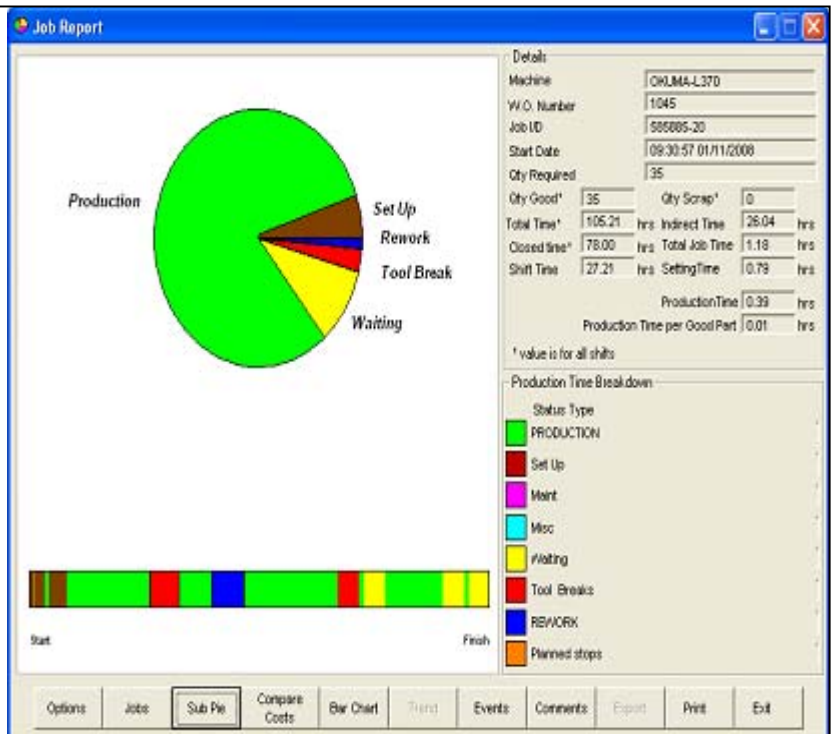

fill in the form and select the date you want.

## New JobPack JobReport feature.

The JobReport option allows for management to see why a job or an operation ran late or for longer than its estimated time. In its simplest form JobReport replaces the time cards that operators use to note times and stoppages. However JobReport does it more accurately and in real time. JobReport utilizes JobPack’s Technical Data Pack, our shop floor operator interface for scanning onto and off of jobs via a standard bar code reader. It offers the operator a menu to select non-production events and stoppage reasons. These events are time stamped and accessible for generating reports “on-the-fly” on any job or operation.

### JobReport Example

Showing a complete operation with the total production time and the non-production events as an overview. A bar chart is directly below showing each series of events in chronological order and for the event duration.

## New module – BIM Business Intelligence Module

For CMTS we are proud to announce the addition of the Business Intelligence Module with the latest release to with Windows7 at the end of October 2009. BIM allows us to customize JobPack and add customer specific functionality to improve productivity even Further when using our Real Time Scheduler or shop floor data collection.
